AMENDMENTS TO THE SPECIFICATION

Replace Paragraph 0054 with the following amended paragraph:

[0054]   The Data Variable is a variable tag that <u>stores</u> the value entered by the user. It names a storage variable for the user-entered data. The configuration template may reference a Data Variable any number of times in lines appearing after the first appearance of the Data Variable in a template file tag. For example, if a configuration template contains the following template file tag,

dns-server <PRIMARY_DNS_SERVER, "Primary DNS Server Address",

IPAddress, "General Settings">

then a subsequent line of the configuration template could contain a line referencing the Data Variable, such as:

ip name-server <PRIMARY_DNS_SERVER>
